SUMMARY

Full stack developer with 3.5+ years of experience in web applications and REST APIs using React, Node.js, Express.js, NestJS, and TypeScript, with PostgreSQL and MongoDB. Work spans freight quotation, healthcare, B2B trade, and real estate platforms, including role-based access control, WebSocket features, payment and CRM integrations, LLM-based email classification and data extraction, and AWS/Docker deployments.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS
Frontend: React.js, Next.js, MobX, Redux, React Query, Tailwind CSS, Material UI
Backend: Node.js, Express.js, NestJS, REST API, WebSocket, JWT Authentication, Role-Based Access Control (RBAC), Zod, MVC, Clean Architecture, SOLID Principles
Databases: PostgreSQL, MongoDB, MySQL, Prisma, Sequelize, Query Optimization
Cloud and DevOps: AWS (EC2, S3), Docker, Nginx, PM2, GitHub Actions, CI/CD
Caching and Monitoring: Redis, Prometheus, Grafana
Integrations: Stripe, SendGrid, Twilio, SMTP, Webhooks, Third-Party APIs, CRM Integrations (REX, AgentBox), OpenAI API
AI Features: LLM-Based Email Classification, LLM Data Extraction (through an internal AI gateway), Schema Validation
Testing and Documentation: Jest, Supertest, Swagger/OpenAPI
Tools: Git, GitHub, Jira, Agile/Scrum
AI Coding Tools: Claude Code, Cursor, GitHub Copilot, ChatGPT

WORK EXPERIENCE

Software Engineer Oct 2025 – Present
aTeam Soft Solutions *India*

aiFreight - Freight Quotation Platform (pre-production) *(NestJS, TypeScript, PostgreSQL, Prisma, React)*

- Worked on a quotation app for ocean FCL exports in which AI reads customer enquiries, a fixed pricing engine calculates every amount, and staff approve each quotation before it is sent.
- Delivered React screens for the enquiry board, enquiry detail, operations dashboard, and settings pages, working against the NestJS REST API.
- Screened inbound email with the AI classifier (non-quotation emails are dropped with an audit record; uncertain or failed results still create an enquiry for staff) and connected phone-call notes to the AI shipment extraction step, with unit tests for both.
- Integrated the Okargo ocean-rates API (live and simulated modes, saved offers with a short expiry time) and introduced an admin setting to price from Okargo rates or the database rate list, never both.
- Created customizable PDF quotation templates, with a database schema and migration, 14 REST API endpoints, and a React admin screen.
- Implemented quotation email delivery through Gmail SMTP, WhatsApp receipt messages, and sending of staff-approved clarification messages.

GenieJackk - B2B Trade Platform *(React.js, Node.js, PostgreSQL, AWS)*

- Wrote 30+ APIs for the trade process, including tiered pricing (freight, duties, VAT) and an order flow with 9+ stages.
- Shipped React.js supplier and customer portals with a product wizard, order tracking, wishlist, and support tickets.
- Linked banking services to multi-stage, multi-currency payments, with bank transfer proof checks.
- Designed module-level permissions and audit logs for several user roles (RBAC).
- Set up login lockouts, password-reset tokens, S3 file storage, and email and SMS notifications through SendGrid and Twilio.
- Tested the APIs with Jest and Supertest and documented them with Swagger/OpenAPI.

WorryFree Healthcare AI *(React.js, Node.js, MongoDB, WebSocket)*

- Authored 40+ REST APIs and MongoDB schemas for admin, provider, and patient portals, covering medical charting and clinical documentation.
- Assembled React.js screens for the portals on top of those APIs.
- Protected access to patient data with JWT authentication and role-based permissions.
- Enabled WebSocket chat, notifications, and live status updates for physician collaboration.

Leads Den - Real-Estate Platform *(Node.js, REST API)*

- Provided REST APIs for property listings, buyer check-ins, offers, and lead tracking for agents, buyers, and vendors.
- Synced two CRMs (REX and AgentBox) through their APIs and webhooks so messages and data stay consistent.

Independent Project Work May 2024 – Oct 2025

Personal Project: BodyFirst

- Launched BodyFirst, a multi-tenant gym management SaaS, with a React frontend (MobX), Stripe subscription billing, Redis caching, and Docker on AWS with Prometheus and Grafana monitoring.

Software Developer Oct 2021 – May 2024

Cognizant Technology Solutions *Kochi, Kerala*

- Maintained 25+ REST APIs in Node.js, Express.js, and MongoDB for enterprise applications, including authentication and RBAC.
- Improved API performance by about 25% by tuning queries and data models.
- Established validation, error handling, and data-model layers for the frontend; resolved production issues with frontend and QA teams in Agile sprints.

PROJECTS

BodyFirst - Multi-Tenant Gym Management SaaS github.com/Abin368/bodyFirst

React.js, MobX, Node.js, Express.js, TypeScript, MongoDB, Redis, Docker, AWS, Stripe, Jest, Swagger

- Structured a multi-tenant backend with 25+ REST APIs for gym administration, memberships, users, and subscriptions.
- Built the React frontend with MobX state management: admin dashboard, member-facing app, Stripe billing pages, and authentication and OTP screens.
- Automated recurring subscription billing with Stripe and used Redis for OTP checks and session caching.
- Containerized the services with Docker on AWS (EC2, S3) and covered the APIs with Jest and Supertest tests.

EDUCATION

Bachelor of Computer Applications (BCA) 2018 – 2021

Surana College, Bangalore, Karnataka
